DETAILED ACTION

Specification

- 1) Cross-Reference section, page 1, should indicate that application 09/452,413 is now patent U.S. 6,360,751.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

- 2) Claims 1-10, are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Townsend (4,700,726).

Claims 1-2, 5-6, 8-9; Townsend discloses a cigarette rod having a first segment 56 positioned at the end to be lit, a second segment 58 positioned at the end of the rod opposite the end which is to be lit, a third segment 60 positioned adjacent the first segment, and a fourth segment 62 positioned adjacent the second segment; said

Art Unit: 1731

segments being aligned in an abutting, end-to-end relationship. Wrapping material 64 is forming the tube-like cigarette rod (col. 2, lines 26-61, and Figure 2). The first segment can have a density greater than the adjacent third segment, while the second segment can have a density greater than the adjacent fourth segment. The density of the fourth segment is less than the density of the third segment. The longitudinal length of the first segment ranges from about 8 to about 20 percent, and the longitudinal length of the second segment ranges from about 8 to about 20 percent of the total length of the rod (col. 4, lines 18-45). The longitudinal length of the first segment is greater than the longitudinal length of the second segment, or at least it would have been obvious that the longitudinal length of the first segment be greater than the longitudinal length of the second segment in situations where the length percentages of the range are greater for the first segment.

Claims 3-4, 7; the tobacco rod is disclosed to be of length from about 55 mm to about 85 mm (col. 2, lines 26-35). The calculated lengths of first and second sections of Townsend are in range from about 4.4 mm to about 17 mm.

Claim 10; the first end is a lit end, and the second end is a filter end (Figure 2)
